

Chapter 13 – Google Meet, Chat & Calendar Administration

Learning Objectives

After completing this chapter, you should be able to:

- Understand Google Meet architecture and controls.
 - Manage meeting policies and security.
 - Troubleshoot common Meet issues.
 - Understand Google Chat architecture and compliance.
 - Configure Chat external access and retention.
 - Understand Google Calendar sharing and delegation.
 - Troubleshoot calendar sync and access issues.
 - Apply enterprise governance to collaboration tools.
-

1. Business Problem

An enterprise uses Google Workspace for collaboration.

Employees report:

- Cannot join external meetings
- Calendar invitations not syncing
- External users cannot chat with internal users
- Meeting recording not available
- Rooms and resources double-booked

These are not random issues—they are **policy, configuration, and identity-related problems** across Meet, Chat, and Calendar.

2. Google Meet Architecture

Google Meet is a real-time communication platform built on:

- Audio/video streaming
- WebRTC technology
- Google infrastructure
- Calendar integration

- Identity-based access control

Meet is tightly integrated with:

- Calendar (for scheduling)
 - Drive (for recordings)
 - Admin policies (for security)
-

3. Google Meet Controls

Administrators can control:

- Who can create meetings
 - Who can join meetings
 - External participant access
 - Screen sharing permissions
 - Chat inside meetings
 - Recording permissions
 - Livestreaming (Enterprise editions)
-

Enterprise Policy Example

Setting	Value
External access	Allowed for trusted domains only
Screen sharing	Internal users only
Recording	Allowed for Managers
Anonymous users	Not allowed

4. Meet Security Model

Meet security is based on:

- Identity (user authentication)
 - Domain policies
 - Meeting codes/links
 - Host controls
-

Meeting Access Flow

```text id="9k3m2a" User clicks Meet link

↓

Authentication check

↓

Domain policy check

↓

Meeting host permissions

↓

Allowed to join? ```

---

## 5. Common Google Meet Issues

### Cannot Join Meeting

Possible causes:

- External access disabled
  - Domain restriction
  - Host approval required
  - User not authenticated
- 

### No Screen Sharing Option

Possible causes:

- Admin policy restricts sharing
  - User role limitation
  - Host controls disabled sharing
-

## Recording Not Available

Possible causes:

- Edition does not support recording
  - Policy restriction
  - User lacks permission
  - Drive storage issues
- 

## Poor Meeting Quality

Possible causes:

- Network issues
- Device performance
- Region latency
- Bandwidth limitations

Use Meet quality tool for investigation.

---

# 6. Google Chat Architecture

Google Chat is a messaging platform integrated with Workspace.

Supports:

- Direct messages
  - Group chats
  - Spaces (persistent collaboration rooms)
  - Bots and integrations
  - File sharing via Drive
- 

# 7. Chat Governance

Administrators control:

- External Chat access
- Message retention
- File sharing in Chat
- Bot access
- Chat history settings

---

## Enterprise Example

Policy:

- Internal Chat allowed
  - External Chat only with trusted domains
  - Chat history enabled for compliance
- 

## 8. Chat External Access

Chat external communication can be:

| Mode       | Description                          |
|------------|--------------------------------------|
| Allowed    | Users can chat with external domains |
| Restricted | Only trusted domains allowed         |
| Disabled   | No external chat                     |

---

## 9. Google Calendar Architecture

Calendar is used for:

- Scheduling meetings
- Resource booking
- Availability sharing
- Delegation
- Room management

Calendar is tightly integrated with:

- Gmail invitations
  - Meet links
  - Directory resources
-

## 10. Calendar Sharing

Users can share calendars with:

- Individuals
  - Groups
  - Entire organization
  - External domains (if allowed)
- 

## Calendar Permissions

| Permission                    | Capability        |
|-------------------------------|-------------------|
| See only free/busy            | View availability |
| See all event details         | View events       |
| Make changes                  | Edit calendar     |
| Make changes + manage sharing | Full control      |

---

## 11. Calendar Delegation

Delegation allows:

- Assistants to manage executives' calendars
  - Scheduling on behalf of others
  - Managing meetings without password sharing
- 

## Enterprise Example

Executive:

CEO

Assistant:

Executive Assistant

Assistant can:

- Create meetings
  - Accept invites
  - Manage schedule
- 

## 12. Calendar Resources (Rooms & Equipment)

Organizations can manage:

- Meeting rooms
- Conference rooms
- Equipment (projectors, devices)

Features:

- Auto booking
  - Conflict detection
  - Resource calendars
- 

## 13. Common Calendar Issues

### Event Not Visible

Possible causes:

- Calendar not shared
  - Wrong account
  - Delegation missing
- 

### Meeting Not Syncing

Possible causes:

- Sync delay
  - External invitation blocked
  - Domain policy restriction
-

## Room Double Booking

Possible causes:

- Resource booking policy misconfigured
  - Manual override permissions
- 

## 14. Troubleshooting Framework

When issues occur in Meet, Chat, or Calendar:

### 1. Identity Check

- Is the user authenticated?
- Is account active?

### 2. Policy Check

- External access allowed?
- Domain restrictions?
- Admin settings?

### 3. Application Check

- Meet / Chat / Calendar configuration

### 4. Integration Check

- Gmail invites
- Drive attachments
- Directory sync

### 5. Logs

- Meet quality tool
  - Admin audit logs
  - Chat logs
  - Calendar logs
- 

## 15. Enterprise Scenario

Employees cannot join external meetings.

Investigation:

- Meet external access disabled
- Trusted domains not configured
- CAA restricting access

Resolution:

- Enable external access for trusted domains
  - Verify Context-Aware Access policies
  - Confirm user authentication
- 

## 16. Best Practices

- ✓ Enable Meet policies based on business units.
  - ✓ Restrict external Chat access using trusted domains.
  - ✓ Use Calendar delegation for executives.
  - ✓ Configure resource calendars properly.
  - ✓ Monitor Meet quality reports.
  - ✓ Use audit logs for Chat and Calendar.
  - ✓ Align policies with security requirements.
- 

## 17. Common Mistakes

- ✗ Allowing unrestricted external Meet access.
  - ✗ Not configuring trusted domains.
  - ✗ Misconfiguring Calendar delegation.
  - ✗ Ignoring Chat retention policies.
  - ✗ Overlooking resource calendar settings.
-

## 18. Interview Questions

1. What controls exist in Google Meet?
  2. Why can a user not join an external meeting?
  3. What is Calendar delegation?
  4. How do you prevent external Chat communication?
  5. What is a Calendar resource?
  6. How do you troubleshoot Meet quality issues?
  7. How are Meet, Calendar, and Gmail integrated?
  8. What policies affect Chat Spaces?
- 

## Key Takeaways

- Meet is controlled by admin policies and host permissions.
  - Chat supports internal and external communication with governance controls.
  - Calendar manages scheduling, delegation, and resources.
  - Most issues are caused by policy restrictions, not application failures.
  - Logs and quality tools are essential for troubleshooting.
- 

## Chapter Summary

In this chapter you learned:

- ✓ Google Meet architecture and controls.
- ✓ Chat governance and external access.
- ✓ Calendar sharing and delegation.
- ✓ Resource management.
- ✓ Troubleshooting methodology.
- ✓ Enterprise collaboration policies.

---

## Next Chapter Preview

Next, we will move into:

### **Chrome Browser, ChromeOS, and Endpoint Ecosystem Management**

This includes:

- Chrome policies
- Browser security
- Extensions control
- Device management
- Zero Trust integration with Workspace
- Endpoint compliance signals for Context-Aware Access

This is where Google Workspace starts extending beyond cloud apps into **device-level enterprise security and control**.
